FRONT LOWER SHOCK RELOCATION BRACKET - PAIR COMPATIBLE WITH JK JEEP (INC. RUBICON)

Designed to allow increased clearance under extreme articulation by moving the lower shock mounts away from the chassis rails. The shock relocation bracket is manufactured from laser cut 5mm SPHC hot rolled steel for increased tensile strength, and CNC folded for precise fitment. Finished in black E-coat the kit includes flush mount quality hardware & installation components. (Installation may require the drilling of 1 x 10mm mounting hole on underside of original shock mount.)
