REAR SHOCK ABSORBER RELOCATION KIT

COMPATIBLE WITH D23/NP300 NAVARA 2015-PRESENT

A new product innovation from Blackhawk4x4 presents two product options...

SB063KIT - is a billet 6061 Alloy CNC machined shock relocation kit for the rear lower mount with supporting product to maintain critical suspension parameters such as:

- Extended progressive bump stops
- Headlight level sensor bracket
- HD greaseable Sway bar extensions
- Extended rubber brake lines

SB064KIT - includes the full SB063KIT plus our Australian made Lower shock guards that braces & strengthens the OE shock mounts.

The shock absorber relocation is designed to give an extra 50mm of droop length to the shock absorber. This allows more rear wheel travel and articulation.

The fitment of the Blackhawk4x4 bump stops in tandem with this kit gives a more progressive bump stop and ensures that the shock absorber doesn't bottom out at full bump due to the relocation. The extended brake lines, adjustable headlight level sensor and extended swaybar links must be fitted with this kit to ensure correct operation.

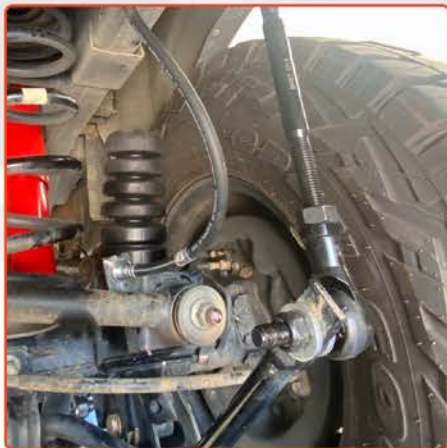

The SB064 shock absorber guard performs two roles. It protects the shock absorbers from damage while it also triangulates and strengthens the shock absorber mount on the diff housing, as they are known to be susceptible to tearing off from the axle tube and are therefore highly recommended.

Shock absorber relocation mount is

- CNC machined from 6061 series aluminium
- FEA validated
- Comprehensive parts kit to maintain suspension clearances.

SB064 Shock absorber guard is

- Australian made
- CNC laser cut and folded from 3mm 304 stainless steel
- Suits large bodied shocks.

Part Number SB063KIT

Rear Shock Absorber Relocation Kit
compatible with D23 Navara 2015-Present

**Shock guards are only supplied with SB064KIT
