UCA4821N – RECESSED CAP FOR INCREASED CLEARANCE WITH 4 SPOKE ALLOY WHEELS

D22 vehicles fitted with factory 16" alloy rims and standard wheel weights have clearance issues with the Blackhawk UCA cap. Initially to prevent any clearance issues remove the cap and use stick on mag wheel weights on these rims. This will provide sufficient clearance for the UCA's.

Blackhawk 4x4 is developing a recessed cap that will sit inside the ball joint housing to keep the ball joint covered from the elements. The part number for this is UCABHCAP5 and will be available shortly.
